Computer Assisted Sorting/Assembly

Norristown, PA..... Dry Cleaning Computer Systems (DCCS) announces CA SORT, a Windows based computer assisted sorting and assembly system

DCCS's CA SORT plugs right into your existing DCCS system without modification to your assembly area. Its small footprint design lends itself to the tightest of spaces. The efficiencies, accuracies and speed of sorting orders with CA SORT far surpasses any manual method giving way to a quick return on investment. The system supports bar coded paper tags, heat seals or RFID (Radio Frequency Identification) and can handle upwards of 100 orders per hour.

Re-engineered and improved to meet present day challenges, DCCS automated assisted assembly represents a software development effort that began over a decade ago. The innovation of this design and unique engineering resulted in U.S Patent # 5,794,213 in the late 1990's and represents one of several patents that have been awarded to DCCS for product design since the inception of the company.

DCCS has been a leading edge software developer of management tools and automated solutions to the Industry for 25 years. Please call 610-275-6090 or email sales@dccs.com for further information.
