DCCS (Dry Cleaning Computer Systems) commemorates 25 years in business !

Norristown, PA: DCCS is rooted in H.L Markman & Associates, a company founded by Herb Markman in 1973 to provide software solutions to the textile maintenance industry. While exhibiting at Clean1981 in Atlanta, a need for a system to manage point of sale pricing along with cash and inventory control for drycleaners became obvious. "Drycleaning was a natural fit for us, blending well with our resources and business strategy, says Herb Markman, CEO. So started the journey that led to the first hard disk based system installed in 1983 and the formation of DCCS in 1984.

"By continuing to challenge ourselves and taking calculated risks, we have pioneered technology that remains the benchmark of an Industry", says Jeff Markman, President.

DCCS has successfully implemented software and systems in thousands of stores on a global scale, boasting market penetration that spans fourteen countries and five continents. The company attributes its success to its versatile, simple, fast and easy to learn software design. "We're constantly reinvesting in the future, looking at technologies that may look implausible today, but will certainly have an impact on how our customers will do business in the years to come".

A stellar example of DCCS leadership in software development is the inception of Positek RFID in 1999, a venture to acknowledge Radio Frequency Identification as an emerging technology and to elevate its potency for use in textile maintenance.

For 25 years, DCCS has been supportive of industry issues and causes through financial contributions. The Company maintains membership in national and local trade associations and frequently donates to the many association events and special occasions. "We feel an obligation to give back to an Industry that been so good to us for so long" says Markman. We are appreciative of the hard working people that make this Industry so great and acknowledge the important work the associations do".

Today, DCCS ingenuity transcends fast and simple point-of-sale by providing software tools to reduce production costs and labor, integrate with industry sorting/assembly conveyors and 24/7 valets, capture timely and easy-to-access customer and marketing information, empower multi-store owners to better manage their own data and assist route operators with the demands of delivery efficiencies and protocol.
