

For Immediate Release. December 9, 2009

New RFID Button Tag

Postek RFID announces a new Radio Frequency ID (RFID) tag for dry cleaning and laundry. The button tag pictured can be attached with a Dennison fastener or with a safety pin. The new tag is available at a fraction of the cost of earlier versions of RFID tags for use in the dry cleaning industry. These tags will survive dry cleaning, laundry and all finishing processes. The smaller size also allows for easy placement and minimal interference when finishing garments. The RFID tag can replace or be used in conjunction with permanent bar coded heat seal labels or temporary bar coded paper tags that are typically used with automated assembly systems. Please call Jeff Markman at 610-275-2905 ext 108 or email at jmarkman@positekrfid.com for more information
