

For Immediate Release. June 6, 2010.

DCCS announces PCI Compliance

Norristown, PA — Dry Cleaning Computer Systems (DCCS) has partnered with Payment Processing Inc. (PPI) to deliver a comprehensive integrated payment solution needed for convenient, secure, and PCI-DSS (Payment Card Industry Data Security Standard) compliant credit card processing.

According to Jeff Markman, President of DCCS, " After investigating several solutions, we felt that PPI and their PayMover product would provide DCCS customers with the best strategy to become PCI-DSS compliant. We not only took proactive steps to meet the upcoming PCI-DSS Standards, but we included new features to ensure that your customer's credit cards are safe".

Some of the key features are.....(1) Credit card software is no longer needed on your system. All credit card transactions are processed and cleared through the PPI Gateway (PayMover). This means fewer issues, faster approvals, and lower costs. (2) PPI PayMover is PCI Compliant. (3) DCCS Revision 2010 includes additional security measures with the use of encrypted swipes. This means the credit card data is encrypted at the point the card is swiped and is unavailable for anyone to see. (4) Customer's credit cards stored for signature on file (SOF) transactions can no longer be stored on your system. The credit card data is now stored securely within the PPI PayMover gateway. This is a huge security benefit over storing credit cards on your server, even if they are encrypted. (5) Lower rates. PPI will meet or beat your existing rates. (6) 24 hour credit card support from PPI.

Upgrading to DCCS 2010 and PayMover is the only way for DCCS owners to address the need to be PCI compliant by July 1, 2010. There may be other steps needed to become PCI compliant and PPI can help you take those steps. Please note that prior revisions of DCCS, Windows and SuperDOS, are not and cannot become PCI compliant.
